

ACM Learn

Learn. Explore. Build. Share.

Official Contributor Guide

1. About ACM Learn

ACM Learn is a community-driven learning initiative where students can share knowledge, guides, resources, and practical experiences across different areas of technology.

Everyone has something they can teach, and everyone has something they can learn.

/newpage

2. What Can You Contribute?

- **Programming** — C/C++, Java, Python, JavaScript/TypeScript, OOP, fundamentals, and best practices.
- **DSA & Competitive Programming** — Data structures, algorithms, problem solving, complexity, and walkthroughs.
- **Web Development** — HTML/CSS, JavaScript, React, Next.js, backend, APIs, databases, and full-stack development.
- **AI & Machine Learning** — ML, DL, GenAI, LLMs, Computer Vision, NLP, and AI tools.
- **Cybersecurity** — Web security, cryptography, CTFs, network security, ethical hacking, and digital forensics.
- **Cloud & DevOps** — Cloud, Docker, CI/CD, Linux, Kubernetes, deployment, and infrastructure.
- **Blockchain & Web3** — Blockchain, smart contracts, Web3 development, cryptocurrencies, and dApps.
- **Open Source** — Git/GitHub, open-source contribution, issues, pull requests, and workflows.
- **Designing (UI & UX)** — UI design, UX principles, wireframing, prototyping, design systems, accessibility, user research, and tools like Figma.
- **Women in Tech** — Stories, experiences, career journeys, mentorship, opportunities, leadership, and resources for women in technology.

3. What Should a Contribution Look Like?

A contribution should help someone learn something clearly and practically.

1. Introduction
2. What you'll learn
3. Prerequisites
4. Core concepts
5. Step-by-step explanation
6. Examples
7. Practice / Exercises
8. Useful resources

The structure is flexible. Focus on making the content useful and understandable for the learner.

Word Limit: Keep your contribution between **500–800 words**, with an absolute maximum of **1,000 words** (around 2–3 pages). We suggest keeping the content in a single `README.md` file.

4. Write for Learners

- Explain concepts clearly with practical examples.
- Break complex ideas into smaller sections.
- Define technical terms when necessary.
- Include useful and reliable resources.
- Credit external work and avoid plagiarism.
- Avoid unnecessary jargon and resource dumping.
- Cybersecurity content must remain ethical and educational.

5. How to Contribute

1. Fork the ACM Learn repository – <https://github.com/IOIT-ACM/ACM-Learn>.
2. Clone your fork.
3. Create a feature branch.
4. Add your contribution to the appropriate domain.
5. Commit and push your changes.
6. Open a Pull Request with a short description.

Example commit:

```
docs: updated resources
```

6. Contribution Philosophy

Share what you know. Learn from others. Build together.

You do not need to be an expert to contribute. If you recently learned something useful, you can help someone else learn it too.
